

SAFed MLCC19 Guidance for the inspection and Thorough Examination of Personal Fall Protection Systems

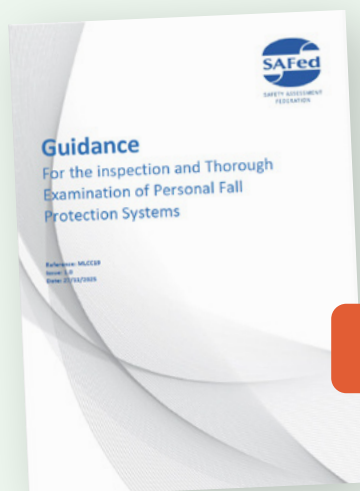

SAFed MLCC19 Guidance for the inspection and Thorough Examination of Personal Fall Protection Systems

The SAFed MLCC19 Guidance is an industry approved document that explains how Personal Fall Protection Systems must be inspected and thoroughly examined to ensure they remain safe for anyone who relies on them. These systems include items such as horizontal lifelines, anchor points, and other fixed fall protection equipment used when working at height.

The guidance sets out what checks are required, how systems should be assessed, what documentation must be in place, and how defects should be categorised and reported. It also explains the responsibilities of Duty Holders and Competent Persons and supports compliance with BS 7883:2019, the key standard governing the design, installation and inspection of fall protection systems.

MLCC19 is written for engineers, technicians, maintenance teams, safety professionals, contractors, and building owners who install, use, maintain or inspect fall protection equipment. Understanding this guidance helps ensure that all work at height is carried out safely, consistently and in line with current industry expectations.

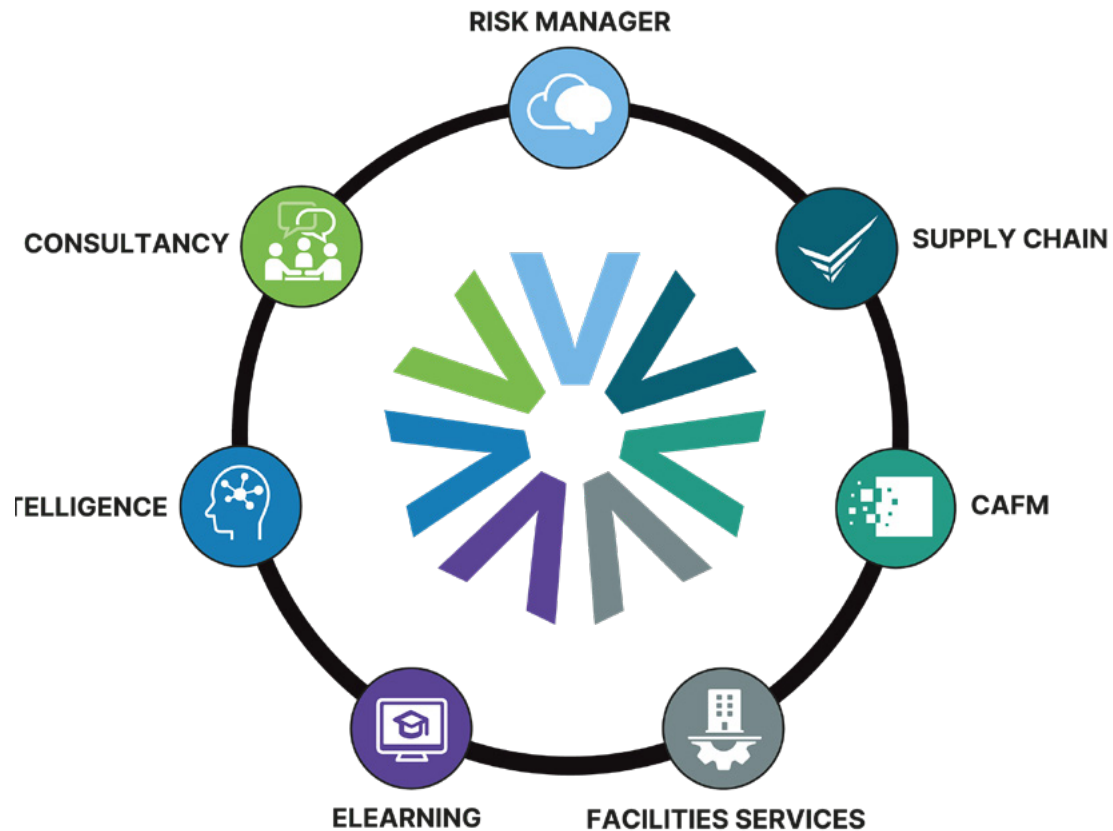

The guidance can be downloaded from the Samed website:
